MIODINE-20%

1) MIODINE - 20% is a disinfectant used in aquaculture ponds. MIODINE - is iodine based compound which helps in controlling red gill, black gill, antennal and tail rot in shrimps. It also helps in controlling fungal protozoan infections. MIODINE helps in controlling gill / tail rot swollen gills in fish. It helps in reducing pathogenic load in Aqua Culture System.

Dosage Shrimps : 500ml to 1 Ltr / Acres in 3 ft. Depth

Fish : 500ml to 1 Ltr / Acre Presentation, 1 Ltr, 5Ltr.

2) BKC : 80%

Benzyl Konium Chloride (80%) is a powerful disinfectant / Sanitizer used in Aquaculture

ponds. BKC-80 is useful in inducing moulting in shrimps. Its a broad spectrum, bactericide viricide and antiprotozoan agent.

Dosage Shrimp : 1 to 1.5 Litres / hectare at 1 Meter Depth

Fish : 1Ltr / hectare or as directed by Aqua consultant Presentation : 1, 5, 20 Litre

3) GLUTARALDEHIDE, MELACHITEGREEN, FORMALDEHYDE, BKC

This product is blend of glutaraldehyde, Formalin and BKC.

Very effective disinfectant and sanitizer. Its a bactericide, viricide and anti protozoan agent.

Dosage Shrimp : 1Ltr / hectare at meter water depth.

Fish : 1 litre / Acre at 6ft Water depth

Presentation : 1 Litre, 5 Litre, 20 Litre.

4) ARGULLUS CTR :

ARGULLUS CTR helps 70 kill ticks, lice and manage mites on live stock. It kill ticks including the one which is resistant to arsenic, organic chlorines, organophosphates and Carbonates.

Dosage : 350ml / Acre or as directed by Aqua consultant, PRESENTATION : 1 Litre.

5) BINDER GEL :

It Contains adhesive, proteins and vitamins. This is one of the best additive that can be used for finding the feed additives.

Dosage : 40-50ml / Kg of feed or as directed by Aqua consultant.

6) MICROPROB :

MICROPROB is a group of beneficiary micro organism and it is designed to maintain healthy environment in aquaculture tank. It contains natural and highly beneficial aerobic and anaerobic micro organisms and waste degrading enzymes. MICROPROB produces antimicrobial and antifungal substances that inhibits vibrio & other pathogenic bacteria and reduces bacterial toxins.

MICROPOB contains heterotrophic nitrifying and denitrifying bacteria which reduces ammonia & nitrate

Dosage : 200g / Acre

Presentation : 500g, 1Kg

7) PROBIOPS :

PROBIOPS is a proprietary blend of highly active beneficial microbes which helps improving the pond environment by sludge degradation & controlling proliferation of pathogens : It contains large amount of waste degrading enzymes which continuously biodegrade variety of accumulated organic load at the pond bottom through continuous mineralisation process & convert them into simpler forms thereby promote healthy environment for shrimps.

Potency : 3 BILLION cfu / ml.

Dosage : 3Ltr / Acre.

MODE OF APPLICATION : Dissolve the required quantity of Mahabiops with wet sand & spread all over the pond with aerator on in the pond.

PRESENTATION : 5Ltrs, 10 Ltrs, 20 Ltrs.

8) TRIPPLE SALT :

Its a powerful broad spectrum multipurpose veridical disinfectant. This product is effective against viral, bacterial and fungal disease causing organisms.

Composition : Potassium hydrogen sulphate 49%
Sodium Chloride : 1.5% ww.

Presentation : 500g

9) MAHAVITC :

Vitamin C is a powerful antioxidant and immumodulator for fishes and Shrimps. Vitamin C is required to maintain the proper health condition. Vitamin C makes various benefits to the fish and shrimps body by holding cells together through collagen synthesis.

Dosage : 2 to 5g / Kg of feed or as directed by aqua culture consultant.

Vitamin C - Regulates the moult phase and helps in quick formatting of exoskeleton in shrimps.

Vitamin C Decreases the disease incidence in Fish and Shrimp.

Helps in energy metabolisms and tissue formation.

10) YUCCA Powder :

It helps to binds noxious gases like ammonia. Yucca powder in derived from plant Yucca Schidigera. It accelerates the break down of organic wastes.

Enhances the intestinal enzyme system.

Dosages : 150g / Acre 15 days.

Presenting 1Kg.

11) OXYTAB :

Enhances the dissolved Oxygen in Fish/ Shrimp ponds,.

Dosages : 500g /Acre or as directed by Aquaculture consultant.

12) Zeolite Powder :

Zeolites efficient at adsorbing odors, suspended solids, waste products life ammonia, organic matter from water column. It helps to remove heavy metals and thereby improving water quality in Aqua culture ponds zeolite provides micro nutrients essential for aquatic plant growth & development.

14) LITTOMIN FS :

Calcium, Magnesium , Potassium Chromium, cobalt, copper, iodine, iron, manganese, molybdenum, selenium, zinc and with highly concentrated Potasium humate

DOSAGE : Apply the product throughout the pond. Apply 2 to 3 liters per acre or as advised by aquaculture technician
